

Load balancer checklist

- ☐ Have you prepared a hardware load balancer? Specify, which one.

- ☐ Does your load balancer support Layer 4 TCP load balancing?

- ☐ Does your load balancer listens to the following ports?

Port	Respective setting in config.yml	Open (yes/no)?
TCP: 80	lb_port	☐
TCP: 443	lb_port_ssl	☐
TCP: 8202	vault_port	☐

- ☐ Does your load balancer route all TCP traffic from the mentioned ports to the same ports on APP1 and APP2 servers (simple round-robin balancing between APP1 and APP2).
- ☐ Are all load balancer ports above accessible over network from every server of the environment?
- ☐ Have you configured the load balancer to perform TCP health-checks of the **lb_port_ssl** port of APP1 and APP2 servers every 5 seconds?
